

My experience with Claude for R package development

Larry Leon *with thanks to Keaven, Nan, Yujie, and John Blischak*

A Two recent CRAN packages

weightedsurv and **forestsearch** — both published on CRAN.

<https://larry-leon.github.io/weightedsurv/>

<https://larry-leon.github.io/forestsearch/>

B forestsearch: a suite for subgroup identification

forestsearch is a comprehensive suite of analysis and simulation tools for exploratory subgroup identification — recently extended from survival to GLM outcomes.

C From paper to working code

Summarizing a published article and reproducing its method and code implementation — working from the article alone.

D Simulation for an HTA consult

Putting the simulation functionality to work on a real consulting project with the HTA group.
